

# Summer Camps for High School Students

## Computer Summer Camp : Computers for All!!

Activities will include:

- ☑ Scratch (free download available at <http://scratch.mit.edu>) After the workshop students will be able to use this easy-to-learn programming tool to create animated stories and games.
- ☑ csunplugged (<http://www.csunplugged.org>), a collection of activities that teach Computer Science through engaging games and puzzles that use cards, string, crayons and lots of running around.
- ☑ Widespread usage of the Internet, especially by children and teens, raises a number of social and ethical concerns, including privacy, security and intellectual property ownership issues. Students will have an opportunity to discuss these important issues as well as computing etiquette.
- ☑ Campers will learn about computing careers and have the opportunity to shadow technical staff in professional computing positions on the Saint Xavier campus.
